

BIBLIOGRAPHY OF THE DEPARTMENT FOR THEORETICAL PHYSICS, UNIVERSITY OF LVIV, IN 1914–1939

Andrij Rovenchak

Department for Theoretical Physics, Ivan Franko National University of Lviv,
12, Drahomanov St., Lviv, UA-79005, Ukraine, tel.: +380 32 2614443, e-mail: andrij.rovenchak@gmail.com
(Received May 14, 2013; in final form — September 20, 2013)

The period of 1914–1939 in the history of the Department for Theoretical Physics, University of Lviv, is analyzed in the paper. A complete to date known bibliography of the staff is listed. Brief biographical accounts of persons affiliated at the Department during these years are given.

Key words: University of Lviv, theoretical physics, bibliography.

PACS number(s): 01.30.Tt, 01.60.+q

To the 140th anniversary of the Department for Theoretical Physics
and the 60th anniversary of the Faculty of Physics, University of Lviv

I. INTRODUCTION

University of Lviv, founded in 1661, is one of the oldest in Eastern Europe. It is located in the city of Lviv (known also as Leopolis in Latin, Lwów in Polish, Lemberg in German, etc.) in the Western part of Ukraine. Physics, as a part of philosophy, has been taught at the University nearly from the beginning. The first chair (Lehrkanzel) of physics was created in the 1770s and occupied by Franz Güssmann (*1741 – †1806), who moved in 1787 to the University of Vienna. The chair was later held by: Ignác Martinovics (*1755 – †1795, chairman in 1783–91), Anton Hiltnerbrand (*1721 – †1798, chairman in 1792–94), Ivan (Johannes, Jan) Zemantsek (*1759 – †1825, chairman in 1794–1805), Anton Gloisner (*1782 – †1855, chairman in 1805–23), August Kunzek (*1795 – †1865, chairman in 1824–48), Aleksander Zawadzki (*1798 – †1868, acting chairman in 1848–52), Viktor Pierre (*1819 – †1886, chairman in 1853–57), Wojciech (Adalbert) Urbański (*1820 – †1903, chairman in 1857–59), and Alois Handl (*1837 – †1915, chairman in 1859–72). This information was compiled from several sources, including [1–4].

In 1873, a separate professorship of theoretical (mathematical) physics – and thus the respective chair – was created in the University of Lviv, following general trends in the development of physics at that time [5]. The first professor was Oskar Fabian (*1846 – †1899), who was succeeded in this position by Marian Smoluchowski (*1872 – †1917), a world-famous physicist, in 1899. Lviv period was most productive in Marian Smoluchowski's scientific work [6]. In spring 1913 he moved to Kraków and the position of a professor of theoretical physics was occupied by Konstanty Zakrzewski in September, 1913. Twenty-five years of a rather complicated period, starting from the World War I and followed by the Interbellum till September, 1939, are described in this work.

In different kinds of documents and publications from the respective period this university unit is referred to in a number of different ways: *seminarjum*, *zakład*, *katedra* in Polish, or *Institut* in German. While *katedra* was not

an official name for the administrative unit, it can be found in some paperwork (mostly in applications for a position at the University). The term *Division* would fit best for *zakład*, the most typical reference for this university unit. In this work, according to the modern trend, the term *Department* is used.

II. PERSONALIA

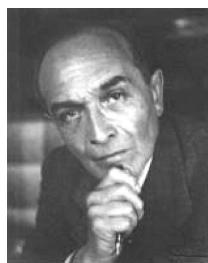

For the period of 1914–1939, eleven persons were affiliated to the Department for Theoretical Physics of the University of Lviv. The list of such persons, with details on dates of their affiliation, is essential for the compilation of the bibliography of the Department. Even if a person did not publish any known work, some publications can be discovered in future and such a list will make the attribution easier.

The chair was held by four professors: **Konstanty Zakrzewski** (1913–18); **Stanisław Loria** (1919–27), acting as a professor of theoretical physics till 1930; **Szczepan Szczeniowski** (1931–36); **Wojciech Rubinowicz** (1937–44). Their brief biographic accounts are given below. They were compiled both from papers [7–12] and from archival data [13–15].

Konstanty ZAKRZEWSKI (*14.I.1876 in Warsaw – †19.I.1948 in Kraków). He graduated from the Jagiellonian University in 1900. His doctoral degree was obtained from the Jagiellonian University in 1900 for the thesis *O sile elektromotorycznej wywołanej przez ruch cieczy w posrebrzonej rurze* [*On the electromotive force induced by the motion of the liquid in a silvered tube*], and the habilitation was awarded in 1908 based on the work entitled *Teoria elektronowa metali* [*Electronic theory of metals*]. Zakrzewski worked at physical laboratories in

Göttingen and Leiden, was an assistant of Heike Kamerlingh Onnes. In 1903 Zakrzewski returned to Kraków, where he worked first as a privatdozent and later as an extraordinary professor of experimental physics in 1908–13. Since September, 1913 till April, 1918 Konstanty Zakrzewski was an ordinary professor of theoretical physics at the University of Lviv. Afterwards, he returned to the Jagiellonian University in Kraków as an ordinary professor of experimental physics. The scientific interests of Prof. Zakrzewski included electronic theory of metals and their optical properties. He designed a new type of an elliptic analyzer to define optical constants of metals. The Commission of Stations for Cosmic Ray Studies of the Polish Academy of Sciences was initiated by Prof. Zakrzewski in 1947. He is a founder of the scientific school of physics of dielectrics in Poland. Konstanty Zakrzewski authored about thirty scientific works. He was a member of the Polish Academy of Arts and Sciences (Polish: Akademja Umiejętności; correspondent since 1920 and full member since 1932).

Stanisław LORIA (*18.I.1883 in Warsaw – †08.VIII.1958 in London). He graduated from the Jagiellonian University in 1905. In 1905–07 he worked as a demonstrator at the Department for Experimental Physics at the Jagiellonian University. His doctoral degree was obtained from the Jagiellonian University in 1907 for the thesis *Untersuchungen über das seitliche Sehen*. In 1907–10 he visited Wrocław, Berlin, London, and Vienna universities, as well as physical laboratories in Amsterdam, Zürich, and Manchester. In 1910 Stanisław Loria became an assistant of the Physical Institute, and in 1911 habilitated as a privatdozent of experimental physics at the Jagiellonian University for the work *O magneto-optycznym zjawisku Kerra w ferromagnetycznych związkach i stopach* [On the magneto-optical Kerr phenomenon in ferromagnetic compounds and alloys]. Since April, 1919 till July, 1927 he worked as a professor of theoretical physics (remaining an acting professor till the end of 1930), and then till 1941 as a professor of experimental physics at the University of Lviv. In 1923–25 S. Loria stayed in the USA working at the Norman Bridge Laboratory of Physics, California Institute of Technology in Pasadena. In 1944–51 he was a professor at the University of Wrocław, and in 1951–58 worked at the University of Poznań. Diverse scientific interests of Prof. Loria included: optics, magneto-optic Kerr effect, radioactivity, diffraction of electric waves, experimental psychology, etc. He authored about thirty scientific publications.

Szczepan Eugeniusz SZCZENIOWSKI (*26.XII.1898 in Warsaw – †18.II.1979 in Warsaw). He graduated from the Warsaw University in 1920, then continued his studies in 1921–26 and worked in 1926–30 at the Institute for Experimental Physics of the Warsaw University. His doctoral thesis was *O wydajności fluorescencji roztworów* [On the fluorescence efficiency of solutions] (1927), habilitation was awarded in 1930. Since January, 1931 till December 1936 Szczepan Szczeniowski headed the Department for Theoretical Physics of the University of Lviv, first as an acting professor in 1931–33, then as an extraordinary professor in 1933–36. In 1937–39 he was a professor of theoretical physics at the University of Vilnius, then in 1945–63 worked at the University of Poznań; in 1957–79 was a professor at the Institute of Physics of the Warsaw University of Technology heading the Institute in 1965–69. In 1952–56 he was a delegate of Sejm of the Polish People's Republic. His scientific interests included: photoluminescence of solutions, cosmic rays, electron diffraction, ferromagnetism, quantum and atomic physics. He authored about fifty scientific publications. Prof. Szczeniowski was a member of the Polish Academy of Sciences since 1964.

Wojciech, in non-Polish publications **Adalbert, RUBINOWICZ** (*22.II.1889 in Sadagóra or Sadhora near Chernivtsi – †13.X.1974 in Warsaw). He graduated from the University of Chernivtsi in 1912 and worked there as an assistant at the Department for Experimental Physics in 1912–16 defending his doctoral thesis entitled *Zur Frage der strengen Lösungen einiger Beugungsprobleme am Keil und Winkelspiegel* in 1914. In 1916 he moved to München working in 1917 as an assistant of Arnold Sommerfeld. In 1916 W. Rubinowicz habilitated at the University of Chernivtsi. In 1919 he worked in Vienna, in 1919–20 in Copenhagen with Niels Bohr. In 1920–22 he became a professor of theoretical physics at the University of Ljubljana. In 1922–37 Wojciech Rubinowicz was a professor of theoretical physics at Lviv Polytechnic, serving as Dean of the General Faculty in 1925/26 and heading the Department for General Mechanics of the Engineering Faculty in 1935–37. Since July, 1937 till June, 1941, and in 1944–45 he was a professor at the Department for Theoretical Physics of the University of Lviv. In 1941–44 he participated in secret or “underground” teaching (Polish: tajne komplety)¹. In 1946–60 Prof. Rubinowicz headed

¹This term here refers to the educational system under the German occupation during World War II, when official higher schools were dissolved and a network of secret Polish universities and other institutions was created [16]. Note also the Secret Ukrainian University in Lviv, which functioned in 1921–25 as a reaction against polonization attempts at the University of Lviv [17].

the Department for Theoretical Mechanics of the Warsaw University, in 1950–53 was also a professor at the Institute of Mathematics in Warsaw. In 1953–60 he also worked at the Institute of Physics of the Polish Academy of Sciences. His scientific interests included: theory of diffraction, quantum theory of radiation, and mathematical physics. Prof. Rubinowicz elaborated the theory of electric radiation, formulated the rule of selection and polarization of electric dipole (1918) and quadrupole (1928–30) radiation, as well as solved the problem of “forbidden” spectral lines. He authored over 100 publications. Prof. Rubinowicz was a member of the Polish Academy of Arts and Sciences (correspondent since 1931 and full member since 1947), Polish Academy of Sciences (1952), he served as President of the Polish Physical Society in 1961–74.

Additionally, six persons were affiliated as assistants [18]:

Edwin Karl Góra, worked as a junior assistant (Polish: asystent młodszy) in the academic year of 1937/38 [19];

Leopold Infeld, the only one to lecture separate courses on the position of a senior assistant (Polish: asystent starszy) in 1930–37 [20–22];

Zofja Krzysik / Orlicz after marriage in 1928, worked as a junior assistant (Polish: asystentka młodsza) in 1921–25 and did not publish any work during that period [23, 24];

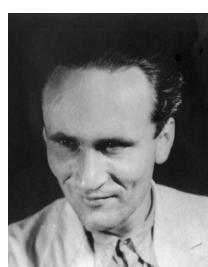

Jadwiga Klonowiecka-Halaunbrenner, worked as a junior assistant in 1927–29 and did not publish any work during that period [25, 26];

Juda Kreisler, worked as a junior assistant in 1933–37 with a short break in 1936 [27];

Bazyli Milianczuk, worked first as a junior assistant (1933–35), then as a senior assistant in 1937–39 [28, 29].

Zenon Chrapływyj was not officially affiliated before 1940 [30] but he actively participated in scientific discussions of the Department and in most of his scientific works from this period the affiliation at the Department is given.

Short biographical sketches of the abovementioned persons are given below.

Edwin Karl GÓRA (*22.X.1911, Bielitz (Bielsko) – 28.II.1994, Providence, Rhode Island, USA). He graduated from the Jagiellonian University in 1934. In 1935–37 Edwin Góra was a teacher at St. Xavier's College (Bombay, India). In 1937/38 he was a junior assistant of the Department for Theoretical Physics at the University of Lviv, then in 1938/39 worked at the Institute for Theoretical Physics at the University of Warsaw. In 1939–44 Edwin Góra continued his education at the University of Leipzig, where in 1942 he obtained a degree of

Doctor of Natural Sciences for the thesis *Quantentheorie der Strahlungsdämpfung* supervised by Werner Heisenberg and Friedrich Hund. In 1944–46 Dr. Góra worked at the Institute for Theoretical Physics of the University of Munich, then he moved to the USA, first worked at the Steubenville College (Ohio) in 1946–49 and since 1946 at the Providence College (Rhode Island). He authored several dozen publications.

Jadwiga HALAUNBRENNER (KLONOWIECKA) (*10.VI.1904, Krasnystaw, Poland – †1989). She graduated from the University of Lviv in 1927. In 1923–25 she worked as a demonstrator, in 1925–27 as a junior assistant of the Department for Experimental Physics, since October 1927 till September 1929 as a junior assistant at the Department for Theoretical Physics of the University of Lviv. In 1928–41 and 1944–45 Jadwiga Halaunbrenner was a teacher in Lviv. In 1941–44 she participated in “underground” teaching. In 1945–74 Jadwiga Halaunbrenner worked at the University of Technology in Kraków (which was a part of the AGH University of Science and Technology before 1954). She obtained the doctoral degree in 1951 for the thesis *O promieniowaniu soli potasowych* [*On the radiation of potassium salts*]. Her scientific interests included: elastic properties of solids, physics of polymers, teaching physics. She authored several dozens of publications.

Leopold INFELD (*20.VIII.1898 in Kraków – †15.I.1968 in Warsaw). He graduated from the Jagiellonian University. In 1921 Leopold Infeld obtained a doctoral degree based on the thesis *Fale świetlne w teorji względności* [*Light waves in the theory of relativity*]. He was a teacher in private Jewish schools of Bendzin and Konin in 1921–24 and Warsaw in 1924–29. Since November 1929 till June, 1937 he was a senior assistant at the Department for Theoretical Physics of the University of Lviv. Leopold Infeld obtained habilitation in 1931 for the work *O t. zw. relacjach niedokładności w mechanice kwantowej i o ich związkach z zagadnieniem pomiarów i przyczynowości* [*On the so-called uncertainty relations in quantum mechanics and their relation to the issue of measurement and causality*]. He had several research leaves as a Fellow of the Rockefeller Foundation, working in 1933–34 with Max Born in Cambridge and in 1936–38 with Albert Einstein in Princeton. In 1938–50 Leopold Infeld worked as a professor at the University of Toronto. In 1950–68 he was a professor at the University of Warsaw. Leopold Infeld is a co-author of the nonlinear Born–Infeld electrodynamics and the theory of equations of motion in the general relativity of Einstein–Infeld–Hoffmann. He authored over 100 publications. Prof. Infeld was a member of the Polish Academy of Sciences (1952) and a member of several other scientific societies.

Juda KREISLER (*12.X.1904 in Tłumacz or Tlumach, now Ivano-Frankivsk region, Ukraine – †1940s?). He graduated from the University of Lviv in 1927. In 1928–29 he was a teacher at a private Jewish gymnasium in Stanislav (now Ivano-Frankivsk), in 1929–31 taught in the 2nd State Gymnasium in Lviv, then in 1932–33 at a private Jewish gymnasium in Dubno. His doctoral degree was obtained from the University of Lviv in 1932 for the work *O rozmieszczeniu kierunkowem fotoelektronów z warstwy M* [On the directional distribution of photoelectrons from the M layer]. In 1933–37 Juda Kreisler was a junior assistant-volunteer, then shortly worked at the Joint-stock company for the exploration and exploitation of bituminous materials (“Pionier”, Spółka akcyjna dla poszukiwania i wydobywania materiałów bitumicznych we Lwowie). In 1940–41 he was a docent at the Department for Theoretical Physics at the University of Lviv; in 1937–39 he worked as a teacher in a school in Lviv. Dr. Kreisler authored five scientific papers. His fate is unknown, most probably he perished during World War II.

Zofja KRZYSIK (ORLICZ) (*26.IX.1898 in Foča, Bosnia – †05.XI.1999 in Poznań). She graduated from the University of Lviv in 1925. Since May 1922 till September 1926 she worked as a junior assistant at the Department for Theoretical Physics and in 1926–29 as a junior assistant at the Department for Experimental Physics of the University

of Lviv. Zofja Orlicz was a teacher in a gymnasium in Lviv until 1941. In 1941–44 she participated in “underground” teaching, was a liaison and later chief of the conspiracy connection of the Lviv District of the Home Army (Polish: Armia Krajowa). In 1944–45 she was an assistant at the Lviv Medical Institute. In 1948–53 Zofja Orlicz was imprisoned in Wrocław and Fordon (near Bydgoszcz) by the communist government for her participation in Armia Krajowa. She was rehabilitated in 1962. Zofja Orlicz was awarded the Medal of the Decade of the Restoration of Independence (1929), Order Virtuti Militari of the 5th degree (1965), the Cross of Valor (three times), the Cross of the Home Army, Officer’s Cross of the Order of Poland Rebirth (1999).

Wasyl or Bazyli MILIANCZUK (Ukrainian: **Василь МІЛЯНЧУК**) (*10.I.1905 in Dobrovidka, now Ivano-Frankivsk region, Ukraine – †03.XI.1958 in Lviv). He studied at the University of Lviv in 1926–27 and then at the Lviv Polytechnic in 1927–33. His first scientific publications appeared yet in 1932: *Milianczuk B. Zeemanefekt der Quadrupollinien nach der Diracschen Theorie* // Zeitschrift für Physik. — 1932. — B. 74, No. 11–12. — S. 810–824; *Verwandlungseffekt der Quadrupollinien* // ibid. — S. 825–847. Since October, 1933 till August, 1935 Wasyl Milianczuk was a junior

assistant-volunteer at the Department for Theoretical Physics at the University of Lviv. He was on scientific training at the Institute of Physics of the Warsaw in 1935, at the Institute of Physics of the Leipzig University in 1936, where Heisenberg, Hund, and Debye worked at that time. In 1937 Wasyl Milianczuk worked at the Vilnius University. He obtained his doctorate in 1935 for the thesis *“Wymuszone” prązki dipolowe / “Forced” dipole lines*, re-confirmed in 1946 as a Candidate of Sciences degree. Since October, 1937 till September, 1939 he was a senior assistant at the Department for Theoretical Physics of the University of Lviv. In 1940–41 Wasyl Milianczuk worked as an acting professor at the Department of Theoretical Mechanics, in 1944 he became a docent and in 1953 a professor of the Department for Theoretical Physics of the University of Lviv. He headed the Department since 1945. In 1957 Wasyl Milianczuk obtained the Doctor of Sciences degree for the work *Влияние неоднородного межмолекулярного поля на атомные спектры* [The influence of non-uniform molecular field on atomic spectra]. His scientific interests included: calculation of intensities and polarizations of quadrupole doublets split by magnetic field, longitudinal and transverse Zeeman effect, Compton scattering, the influence of non-uniform electric field in the plasma of gas discharge on spectral lines, issues of electrodynamics with higher derivatives, the theory of collisions of mesons with nucleons, theory of slow molecular collisions, etc. Prof. Milianczuk was one of the founders of the Lviv School of spectroscopy. He authored about thirty scientific publications. He was elected a member of the Shevchenko Scientific Society in 1932.

Zenon or Zenobiusz CHRAPLYWYJ, Zeno CHRAPLYVY (Ukrainian: **Зенон ХРАПЛИВИЙ**) (*15.III.1904 in Lysivtsi near Zalishchyky, now Ternopil region, Ukraine – †01.X.1983 in St. Louis, USA). He studied at the University of Vienna in 1923–25, at the Jagiellonian University in 1925–26, and at the University of Lviv in 1926–29.

In 1929–30 Z. Chraplywyj was an acting assistant at the Department of Mathematics at the University of Lviv. In 1932 obtained a doctoral degree for the thesis *O pewnych trudnościach w mechanice falowej* [On some difficulties in the wave mechanics], which was prepared at the Department for Theoretical Physics of the University of Lviv. In 1936–39 he was a teacher at the Lviv Academic Gymnasium. In 1939–41 Z. Chraplywyj worked at the University of Lviv as a vice-rector and a professor at the Department for Theoretical Physics. In 1941–48 he worked at the Ukrainian Free University (in Prague, then in München after World War II) and in 1948–72 was a professor at the St Louis University (USA). The main field of his scientific interests was relativistic quantum mechanics. He was elected a member of the Shevchenko Scientific Society in 1934. Prof. Chraplywyj was a member of the New York Academy of Sciences and the American Physical Society member.

Four more names appeared in some publications from the 1930s with the affiliation listed as ‘Zakład Fizyki Teoretycznej U. J. K.’ or abbreviated as ‘Z. F. T. U. J. K.’ with ‘U. J. K.’ standing for the university name ‘Uniwersytet Jana Kazimierza’, namely: Abraham Melamid (in 1937, upon naturalization as a Palestinian citizen, he changed his name to Abraham Amery, אֶבְרָהָם אַמְּרִי [31]), Bolesław Matula, Irena Postępska, and M. Tymoszyk (Михайло Тимошик). These persons were the students at that period [32] and, evidently, specialized in theoretical physics.

Note that these were not the first students’ papers at the Department: yet in 1909, Volodymyr Kučer (Kuczer; Володимир Кучер) published an article:

Кучер В. Основи електроніки // Збірник математично-природописно-лікарської секції Наукового Товариства імені Шевченка. — 1909. — Т. XIII. — С. 1–68.

III. BIBLIOGRAPHY AND COMMENTS

The following list is, to my knowledge, the most complete information about publications of the Department for Theoretical Physics of the University of Lviv for the respective period. It concludes two previous studies [5, 6] finalizing the pre-1939 time.

The list contains all kinds of publications where the representatives of the Department are listed as authors, editors, translators, etc. In some publications the affiliation is not given, so the attribution was made based on biographical details.

Within each year, publications are ordered according to their type. First, books or chapters are listed, then research papers are given followed by popular articles, and finally other publication types are placed: reviews, abstracts, obituaries, etc.

Items preceded by an asterisk (*) were not checked *de visu*, the respective information was cross-checked in several library catalogs, including the libraries of the University of Lviv, University of Warsaw, Jagiellonian University, Yale University, National Library of China, National Diet Library (Japan), British Library, Library of Congress, as well as the WorldCat database [33].

Some title pages and book covers are shown in Figs. 1–3.

1922

10. Loria S. **Względność i grawitacja. Teoria A. Einsteina**: Wydanie drugie w nowem opracowaniu znacznie rozszerzone. — we Lwowie: Księgarnia Nakładowa H. Altenberga, 1922. — VI, 159 s.
11. Loria S. **Kwantowa teoria seryj widmowych, cz. I. i II.** // Roczniki Chemii: Organ Polskiego Towarzystwa Chemicznego — 1922. — T. II. — S. 44–47.

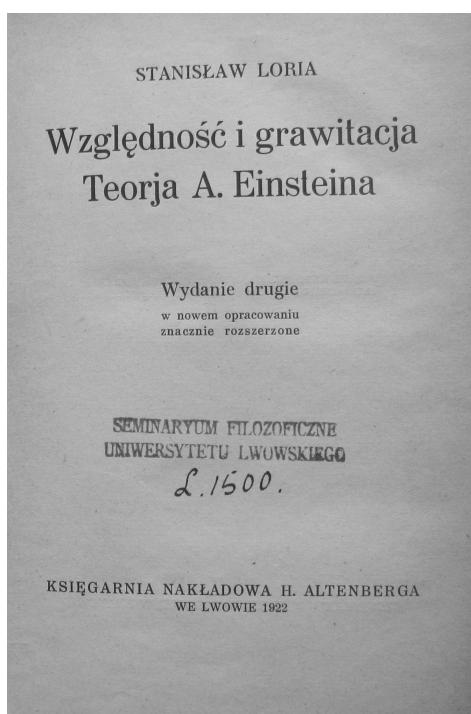

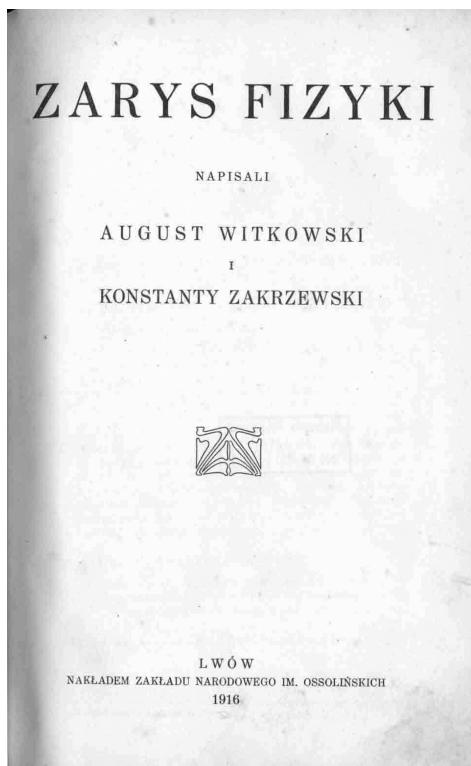

Fig. 1. Title pages of *Zarys fizyki* by August Witkowski and Konstanty Zakrzewski (1916) and *Względność i grawitacja*, 2nd edition, by Stanisław Loria (1922).

1925

12. *Loria S. Indirectly excited fluorescence spectra* // Phys. Rev. — 1925. — Vol. 26, No. 5. — P. 573–584.

Professor Loria worked at the Norman Bridge Laboratory of Physics, California Institute of Technology, in 1923–25. While in the above paper his relation to the University of Lviv is mentioned in the footnote as “Professor of Physics at the University, Lwow, Poland”, another paper from that period contains no such reference:

- *Loria S. The metastable $2p_3$ -state of mercury atoms* // Proceedings of the National Academy of Sciences of the United States of America. — 1925. — Vol. 11, No. 11. — P. 673–679.

1926

13. *Loria S. Zur Frage nach der Abhängigkeit der sensibilisierten Fluoreszenz vom Zusatz der Gase* // Physikalische Zeitschrift. — 1926. — B. 38, No. 9–10. — S. 672–674.

In 1927–30, the position of the professor of theoretical physics at the University of Lviv was not filled. Prof. Loria was appointed a professor of experimental physics in the end of 1926 and remained an acting professor of theoretical physics. His papers from this period thus can be attributed to the bibliography of the Department with some precautions:

- (a) *Loria S. Alchemja średniowieczna w świetle fizyki dzisiejszej* // Kosmos: czasopismo polskiego Towarzystwa przyrodników imienia Kopernika. Serja B. — 1929. — Rocznik LIV, Zeszyt 1. — S. 104–118.
- (b) *Loria S. Znaczenie prac Marji Skłodowskiej-Curie dla rozwoju fizyki i chemii* // Kosmos: czasopismo polskiego Towarzystwa przyrodników imienia Kopernika. Serja B. — 1930. — Rocznik LV, Zeszyt 1. — S. 1–9.

It might be also interesting to note the following publication by Zofja Krzysik:

- *Krzysikowa Z. O związkach między promieniami β i γ* (Referat na podstawie prac p. L. Meitner) // Kosmos: czasopismo polskiego Towarzystwa przyrodników imienia Kopernika. Serja B. — 1928. — Rocznik LIII, Zeszyt 1. — S. 10–23.

At the time of publication (and almost certainly writing) Zofja Krzysik was affiliated at the Department for Experimental Physics of the University of Lviv. The above item is the only her article I was able to locate.

31. *Szczepanowski S.* Optyka fal materii // Wszechświat: pismo przyrodnicze. — 1932. — N 1. — S. 12–18.

In 1932, two doctoral theses were defended at the Department, namely:

- (a) *Chrapkwyj Z.* O pewnych trudnościach w mechanice falowej: Przyczynki do teorji działania własnego elektronu i teorji ujemnych stanów energji.

- (b) *Kreisler J.* O rozmieszczeniu kierunkowem fotoelektronów z warstwy *M*.

The preparation of the two above theses at the Department is mentioned as merits of Szczepan Szczepanowski, who headed the Department at that time, in the request to the Ministry of Religious Affairs and Public Education (Polish: Ministerstwo Wyznań Religijnych i Oświecenia Publicznego) about his appointment for the position of an extraordinary professor of theoretical physics at the University of Lviv.

41. Szczeniowski S. Nowe dane o positronie // Mathesis Polska. — 1933. — T. 8, Nr. 7–8. — S. 106–109.
- Leopold Infeld was a Research fellow of the Rockefeller Foundation in 1933–34. He was given a paid leave of absence from the University of Lviv for the period of 01 December 1933 to 31 December 1934 to work in Cambridge with Max Born. Infeld's papers from that period do not bear any sign of affiliation at the University of Lviv. The following list of nine papers is thus given for completeness:
- (a) Born M., Infeld L. Electromagnetic mass // Nature. — 1933. — Vol. 132, No. 3347. — P. 970.
 - (b) Born M., Infeld L. Foundations of the new field theory // Nature. — 1933. — Vol. 132, No. 3348. — P. 1004.
 - (c) Born M., Infeld L. Foundations of the new field theory // Proceedings of the Royal Society of London. Series A, Mathematical and Physical Sciences. — 1934. — Vol. 144, No. 852. — P. 425–451.
 - (d) Born M., Infeld L. Remarks on the paper by Frenkel on Born's theory of the electron // Proceedings of the Royal Society of London. Series A, Mathematical and Physical Sciences. — 1934. — Vol. 146, No. 859. — P. 935.
 - (e) Born M., Infeld L. On the quantization of the new field equations. I // Proceedings of the Royal Society of London. Series A, Mathematical and Physical Sciences. — 1934. — Vol. 147, No. 862. — P. 522–546.
 - (f) Born M., Infeld L. Principles de la nouvelle électrodynamique quantique // Comptes Rendus hebdomadaires des séances de l'Académie des Sciences. — 1934. — T. 199. — P. 1297–1298.
 - (g) Born M., Infeld L. Déduction de l'équation d'ondes Dirac à partir l'électrodynamique quantique // Comptes Rendus hebdomadaires des séances de l'Académie des Sciences. — 1934. — T. 199. — P. 1596–1598.
 - (h) Infeld L. Dirac's equation in the general relativity theory // Acta Physica Polonica. — 1934. — Vol. III. — P. 1–14.
 - (i) Born M., Infeld L. On the quantization of the new field equations. II // Proceedings of the Royal Society of London. Series A, Mathematical and Physical Sciences. — 1935. — Vol. 150, No. 869. — P. 141–166.
- 1934**
42. Infeld L. The world in modern science. Matter and quanta / translated by Louis Infeld; with an introduction by Albert Einstein. — New York: G. P. Putnam's Sons, 1934. — 287 p. (US edition); London: V. Gollancz, Ltd., 1934 (*British edition).
This is the English translation of item 32. It was used for subsequent translations into other languages: Dutch, Ukrainian, Chinese, and Japanese.
43. Szczeniowski S. Promienie kosmiczne // Od gwiazdy do atomu / J. Weyssenhoff, Cz. Białobrzeski, L. Wertenstein, Sz. Szczeniowski. — Warszawa: Trzaska, Evert i Michalski S. A., [1934]. — S. 129–186.

45. Milianczuk B. Über den Einfluss des magnetischen Feldes auf den Comptoneffekt // Acta Physica Polonica. — 1934. — Vol. III. — S. 133–142.
46. Milianczuk B. Zur Frage nach den Summenregeln in "erzwungenen" Dipolmultipletts // Sammelschrift der mathematisch-naturwissenschaftlich-ärztlichen Sektion der Ševčenko-Gesellschaft der Wissenschaften in Lwiw (Lemberg). — 1934. — B. XXX. — S. 125–128.

47. Kreisler J. **Sztucznie wzbudzona promieniotwórczość** // *Mathesis Polska*. — 1934. — T. 9, Nr. 5–6. — S. 82–87.

48. Szczeniowski S. **Nowe oblicze fizyki** // *Kultura i wychowanie*. — 1934. — Rok I. — S. 205–226.

1935

49. Haas A. **Zasady fizyki. Światło, elektrodynamiczność, ciepło, materja** / Przełożył dr. Sz. Szczeniowski. — Warszawa: Trazaska, Evert i Michalski S. A., [1935]. — VI, 309 s.

50. * Infeld L. **Stof, straling en atomen: het wereldbeeld in de moderne natuurwetenschappen** / met een voorwoord van Albert Einstein; nederlandse vertaling van M. C. Geerling. — Amsterdam: N.V.D.B. Centen's Uitgevers-Mij., 1935. — VIII, 288 S.

This is the Dutch translation of item 42.

51. * **科學在今日** / 茵菲爾原著; 秦仲實譯. — 上海: 開明書店, 民國24[1935]. — 207頁.

Kē xué zài jīn rì / Yīn fēi ěr (L. Infeld); translated by Qín Zhòng Shí. — Shànghǎi: Kāi míng shū diàn, 1935. — 207 p.

This is one of the Chinese translations of item 42. The year of publication is given in the Republic of China (Minguo) calendar. The description is based on the WorldCat data and [34]. Note that in the latter Beijing is mentioned as the place of publication.

52. Milianczuk B. **Über die Summenregeln in normalen “erzwungenen” Dipolmultipletts** // *Acta Physica Polonica*. — 1935. — Vol. IV, Fasc. 1/2. — S. 65–71.

Three more papers by Bazyl Milianczuk appeared in 1935, with affiliation listed as “Technische Hochschule in Lemberg”. Additionally, in 1935 he also defended a doctoral thesis. The following list is given for completeness:

(a) Milianczuk B. **Über die magnetische Dipolstrahlung** // *Bulletin International de l'Académie Polonaise des Sciences et des Lettres. Classe des sciences mathématiques et naturelles. Série A: Sciences mathématiques*. — 1935. — S. 430–437.

(b) Milianczuk B. **Über die Dispersion des Lichtes in der Umgebung der magnetischen Dipollinien** // *Bulletin International de l'Académie Polonaise des Sciences et des Lettres. Classe des sciences mathématiques et naturelles. Série A: Sciences mathématiques*. — 1935. — S. 438–444.

(c) Milianczuk B. **Zur Frage nach der Strahlung eines magnetischen Dipols** // *Sitzungsberichte der mathematisch-naturwissenschaftlich-ärztlichen Sektion der Ukrainischen Ševčenko-Gesellschaft der Wissenschaften in Lemberg (Lwiw)*. — 1935. — Heft XVII. — S. 6–7.

(d) Milianczuk B. **“Wymuszone” prązki dipolowe**: Praca doktorska (1935).

53. Kreisler J. **Die Übergangswahrscheinlichkeiten im zweifach angeregten Heliumatom** // *Acta Physica Polonica*. — 1935. — Vol. IV, Fasc. 1/2. — S. 151–161.

Note. Curiously, this paper is cited several times with an author given as “K. Kreisler”, cf. [35]. This is due to a typo in even-page headers in the original publication, where “K. Kreisler” is printed instead of “J. Kreisler”.

54. Postępska I. **Harmonischer Oszillator nach der Diracschen Wellengleichung** // *Acta Physica Polonica*. — 1935. — Vol. IV, Fasc. 3. — S. 269–280.

55. Chraplywyj Z. **On the Lorentz equation of motion in the new electrodynamics** // *Acta Physica Polonica*. — 1935. — Vol. IV, Fasc. 4. — P. 395–404.

56. Matuła B. **Rekursionsformeln der verallgemeinerten Kugelfunktionen** // *Acta Physica Polonica*. — 1935. — Vol. IV, Fasc. 4. — S. 419–426.

57. Infeld L. **Problem struktury elektronu w fizyce współczesnej** // *Mathesis Polska*. — 1935. — T. 10, Nr. 1–2. — S. 27–39.

58. Szczeniowski S. **[Recenzja:] Hermann Weyl. Mind and Nature**. Philadelphia 1934. University of Pennsylvania Press. S. VI + 100 // Nauka Polska. Jej potrzeby, organizacja i rozwój. — 1935. — T. XX. — S. 317–322.

1936

59. Szczeniowski S. **Promienie kosmiczne** // Od gwiazdy do atomu / J. Weyssenhoff, Cz. Białobrzeski, L. Wertenstein, Sz. Szczeniowski. — Wyd. 2 uzup. — Warszawa: Trzaska, Evert i Michalski S. A., 1936. — S. 161–238.

60. * **物質與量子** / 茵菲爾原著; 何育杰譯. — 上海: 商務印書館, 1936.

Wù zhí yǔ liàng zǐ / Yīn fēi ěr (L. Infeld); translated by Hé Yù Jié. — Shànghǎi: Shāng wù yìn shū guǎn, 1936.

This is another Chinese translations of item 42. According to the Chinese National Library catalog this item was printed in two parts, pages up to 133 and 135–260; in the WorldCat database the number of pages is 233.

61. Infeld L. **The new electrodynamics and the fine structure constant** // *Nature*. — 1936. — Vol. 137, No. 3468. — P. 658.

62. Infeld L. **The new action function and the unitary field theory** // *Proc. Camb. Philos. Soc. Math. Phys. Sci.* — Vol. 32, Iss. 1. — P. 127–137.

63. Chraplywy Z. Sur les équations de mouvement de l'électrodynamique nouvelle // Comptes Rendus hebdomadaires des séances de l'Académie des Sciences. — 1936. — T. 202. — P. 396–397.
64. Infeld L. Nowe funkcje działania w jednolitej teorji pola // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 35.
65. Infeld L. Stała 137, pole protonu, a jednolita teoria pola // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 35.

67. Chraplywy Z. Atom wodoru a jednolita teoria pola // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 35–36.
68. Postępska I. Oscylator harmoniczny według równania Diraca // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 36.
69. Matuła B. Elektron w polu dodatnio naładowanego jądra, zawierającego pojedynczy biegun magnetyczny // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 36–37.
70. Tymoszyk M. Absorpcaja trzech fotonów metodą Diraca // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 37.
71. Krejsler J. Uwagi o Schrödingerowskiej postaci jednolitej teorji pola Borna–Infelda // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 37.
72. Krejsler J. Przyczynek do teorji rozbijania deutonów przez deutony // Program VIII Zjazdu fizyków polskich, Lwów, 28.IX – 2.X 1936. — Lwów : Nakładem Komitetu organizacyjnego, 1936. — S. 37–38.

Fig. 2. Title pages of the English, Ukrainian, and Japanese translations of *Nowe drogi nauki* by Leopold Infeld (1933).

1937

73. Jeans J. Horyzonty nowej nauki / Z drugiego wydania oryginału przełożył i przedmową zaopatrzył dr. Sz. Szczeniowski. — Warszawa: Nakładem "Mathesis Polskiej", 1937. — [8], 281 s.

74. Ihfelyd L. Матерія і кванті в світлі сучасної науки / Переклад з англійського видання 1934 року під редакцією проф. А. В. Желеховського. — Харків: Державне науково-технічне видавництво України, 1937. — 208 с.

This is the Ukrainian translation of item 42.

75. *Infeld L. A new group of action functions in the unitary field theory. II* // Proceedings of the Cambridge Philosophical Society. Mathematical and Physical Sciences. — Vol. 33, Iss. 1. — P. 70–78.
76. *Infeld L. The Lorentz transformations in the new quantum electrodynamics* // Proceedings of the Royal Society of London. Series A, Mathematical and Physical Sciences. — 1937. — Vol. 158, No. 894. — P. 368–371.
77. *Chraplywy Z. O pojęciu potencjału w nowej elektrodynamice. — Zum Potentialbegriff in der neuen Elektrodynamik* // Bulletin International de l'Académie Polonaise des Sciences et des Lettres. Classe des sciences mathématiques et naturelles. Série A: Sciences mathématiques. — 1937. — S. 509–520.
78. *Chraplywy Z. On the Lorentz' equation of motion in the new electrodynamics II* // Acta Physica Polonica. — 1937. — Vol. VI, Fasc. 1. — P. 31–39.
79. *Kreisler J. Zur Theorie der Zertrümmerung von Deuteronen durch Deuteronen* // Acta Physica Polonica. — 1937. — Vol. VI, Fasc. 4. — S. 327–334.
80. *Chraplywy Z. The fundamental notions of electrodynamics and the unitary field theory* // Sitzungsberichte der mathematisch-naturwissenschaftlich-ärztlichen Sektion der Ukrainischen Ševčenko-Gesellschaft der Wissenschaften in Lemberg (Lwiw). — 1937. — Heft XXV. — P. 11–12.
81. *Храпливий З. Основні поняття електродинаміки а унітарна теорія поля* // Збірник математично-природописно-лікарської секції Наукового Товариства імені Шевченка. — 1937. — Т. XXXI. — С. 51–56.
- Two other items by Zenon Chraplywy were published in 1937–38, but these do belong to his dyadic work and thus are linked to his official affiliation as a teacher at Lviv Academic Gymnasium, so they are placed beyond the main list here:
- (a) *Chraplywy Z. O wprowadzeniu wielkości i jednostek elektrycznych* // Fizyka i chemia w szkole. — 1937.
- (b) *Храпливий З. Нарис фізики: підручник для IV класи гімназії*. — Państwowe Wydawnictwo Książek Szkolnych we Lwowie, 1938. — 282, [6] с., [1] л. вклейка.
82. *Szczeniowski S. Wpływ fizyki na rozwój kultury dzisiejszej* // Nauka Polska. Jej potrzeby, organizacja i rozwój. — 1937. — T. XXII. — S. 25–36.
- Note. While S. Szczeniowski was affiliated as a professor at the University of Vilnius since January, 1937, the above item belongs most likely yet to the time he worked in Lviv. Such a conclusion can be drawn from the sections on chronicles from scientific meetings in the journal *Nauka Polska*: the issue from 1937 contains information from events of 1936 (and this holds for other years), thus it was in the course of preparation in 1936.

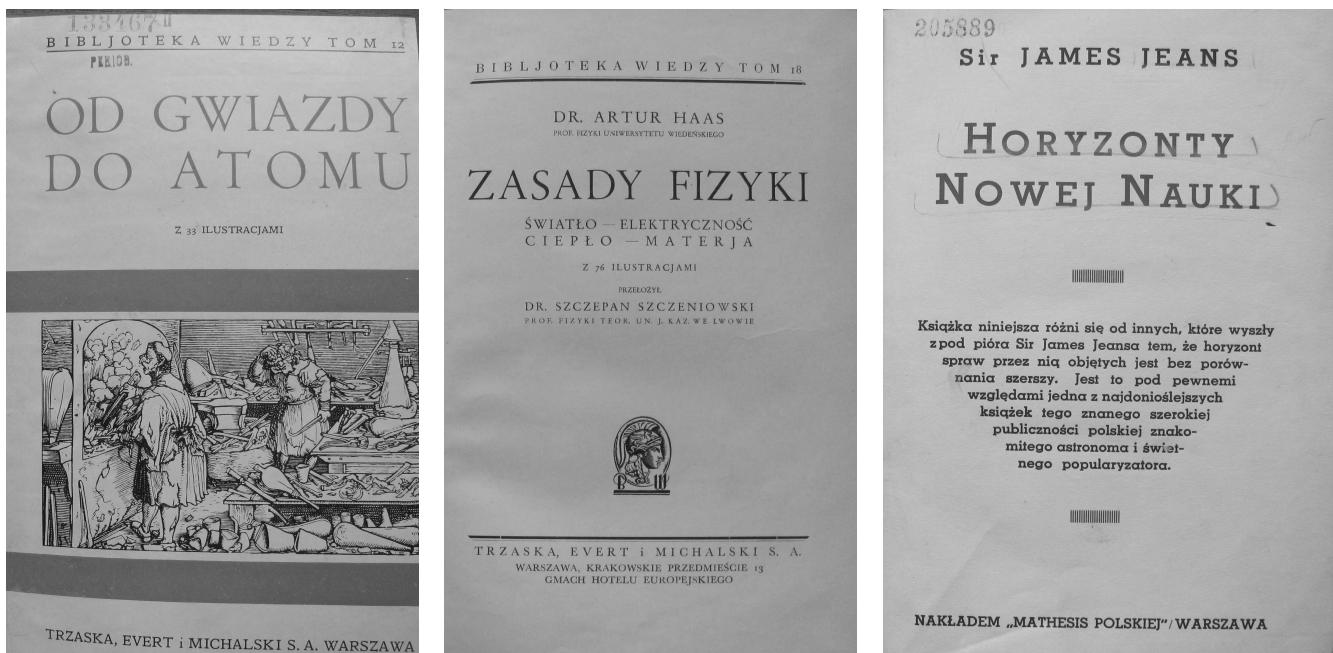

Fig. 3. Title pages of books co-authored or translated by Szczepan Szczeniowski.

This is the Japanese translation of item 42.

ACKNOWLEDGEMENTS

I would like to express my gratitude for the help in compiling this bibliographic list to the following persons and institutions: Institute of Physics Library, Jagiellonian University (Kraków); Lviv University Scientific Library; Accademia dei Lincei; Dr. Yuriy Chorniy (Vilnius University); Masayuki Ito, Akiko Endo, and Mika Kiya (National Diet Library, Japan); Dr. Natalia Kotysba (Warsaw University); Lilianna Lewandowska (Muzeum Politechniki Krakowskiej); Dr. Yaroslav Pavlyukh (Halle); Charles Riley (Yale University Library); Adam Rovenchak (Lviv Stefanyk Scientific Library). Advices and hints from Prof. Andrzej Kajetan Wróblewski were of invaluable help in complementing the list.

БІБЛІОГРАФІЯ КАФЕДРИ ТЕОРЕТИЧНОЇ ФІЗИКИ ЛЬВІВСЬКОГО УНІВЕРСИТЕТУ В 1914–1939 РОКАХ

Андрій Ровенчак

*Кафедра теоретичної фізики, Львівський національний університет імені Івана Франка,
бул. Драгоманова, 12, Львів, 79005, Україна*

У статті проаналізовано історію кафедри теоретичної фізики Львівського університету протягом 1914–1939 років. Наведено повний відомий на сьогодні перелік праць кафедри за цей період. Подано короткі біографічні відомості про осіб, які працювали на кафедрі в ці роки.
